**DETAILED ACTION*****Specification***

The disclosure is objected to because of the following informalities: Several grammatical and typographical errors appear in the instant specification. The following are a few of the instances:

Page 2, line 20, "there has been problem" is grammatically incorrect; Page 4, line 8, "tot he" is incorrect; Page 7, line 1, "Definition" should not be capitalized.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 3, 5, and 6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant has amended claim 1 to include the phrase "said film consisting of Cr<sub>2</sub>O<sub>3</sub>".

Applicant points to Figure 2 with the point at 30 nm for support stating that the ratio of 60/40 Cr/O results in this formula. This is not considered to provide clear support for this phrase.

Figure 2 shows that not all of the film is made of a ratio that is 60/40 (oxide is present up to 100 nm) and the claim is not limited to a specific thickness of the layer. Therefore, support for the entire film being made of Cr<sub>2</sub>O<sub>3</sub> does not appear to be present in the application. Additionally, there is no clear disclosure that Cr<sub>2</sub>O<sub>3</sub> is the sole chromium oxide that is formed by the method.

Art Unit: 1794

There is no clear way to ascertain what types of chromium oxides are present in the film based upon the Figure. The film formed may be a mixture of different chromium oxides (such as chromate and  $\text{Cr}_2\text{O}_3$ ) which result in the values represented in the graph. Therefore, it is not clear that there is support for the layer being solely made of  $\text{Cr}_2\text{O}_3$  based upon Figure 2.

### ***Response to Arguments***

Applicant's arguments filed 12/02/08 have been fully considered but they are not persuasive. Applicant has amended the claims to overcome a 112-first paragraph rejection. The addition of "wet plating method" has overcome the previous rejection. However, the addition of "the film consisting of  $\text{Cr}_2\text{O}_3$ " has necessitated the new 112-first paragraph rejection as stated above.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
